

EX-ANTE INFORMATION ON THE COCTS AND RELATED FEES

Here is the information on all costs and other payments related to certain investment and/or additional services and financial instruments that occur despite the inherent market risk. Investment and/or additional services are selected selectively for illustrative purposes, covering different asset classes and main order execution venues. Costs and payments are presented by aggregating so that all costs and the cumulative effect of the costs on the return of investment could be estimated.

Costs and fees are estimated for a one-year investment in a zero-profit scenario assuming the investment is sold at the end of the year. Costs and fees are calculated based on the expected amount of the investment and the investment period, and the information provided is based on the Bank's applicable rates and data from third parties. Actual amounts may deviate from the estimates, as actual costs will depend on the particular financial instrument and market and may depend on trading volume. The cost of investment and / or ancillary services is incurred directly, and the cost of the financial instrument reflects the fees included in the price of the financial instrument and reduces it by this amount.

The amounts of the investment results are presented for illustrative purposes in order to show the total impact of the costs and associated fee returns on positive, neutral and negative activities scenarios when the investment is sold at the end of the investment period. These scenarios are not necessarily based on objective data analysis and should under no circumstances be considered as indicators for future outcomes. The geometric mean method, calculated using the formula $[(1+R_1) \times (1+R_2) \times (1+R_3) \dots \times (1+R_n)]^{1/n-1}$ is used to calculate the average return, where R - return on investment in year n; and n is the number of years.

STOCK TRADING in the Nasdaq Vilnius stock exchange via internet - Investment costs and fees

The calculations are based on AB Šiaulių bankas rates applied for online stock trading on the Nasdaq Vilnius stock exchange, safekeeping and other related fees, if applicable.
